

SmarTalk

System Telephones

Why SmarTalk?

Single and Three line system telephones

Easy-to-use, programmable buttons

Station network up to 10 phones without a central control unit (KSU)

Compatible with standard analog telephone lines, PBXs, PC-PBXs, and Centrex services

We know how to help you succeed

Flexible communications are essential to a growing business. SmarTalk system telephones are powerful enough to support big business call management capabilities without the big business price tag.

SmarTalk system telephones can be networked to deliver features normally found on more expensive systems. System functionality includes intercom, line monitoring, station monitoring, call transfer, call announce and paging, for up to ten stations, all without the need for a central control unit (KSU). A network of SmarTalk phones is an effective, stand-alone, solution for small businesses and it can be configured to work with and enhance features supplied by a PBX, PC/PBX or your telephone service provider.

SmarTalk provides unparalleled flexibility and the ability to program feature codes for one-touch access using custom key caps. SmarTalk ends the struggle of trying to memorize obscure key sequences. After all, call management features are useless if no one can figure out how to use them. With SmarTalk, users have one button access to commonly used features like call transfer, conference, voicemail and call forward. SmarTalk helps prioritize and simplify communications by making every user a power user.

SmarTalk also features a built-in speakerphone, large display screen and a slender profile that reduces desk clutter. Designed for the home or office, SmarTalk can be used as a single unit or scaled to meet the needs of the fastest growing organization.

Form • Function • Performance

Single line

ST 110

Three line

ST 310

Available in single or three line models, SmarTalk system phones can operate as single phone and grow to a system of up to ten stations, as your needs change. Highly flexible and configurable, the ST310 is ideal for use in a SmarTalk system on standard business telephone lines, while the ST110 is a perfect choice to inter-operate with and enhance the services provided by a PBX, PC/PBX, or Centrex lines. Loaded with features, our phones are ideal for any growing small or medium sized business and because they need no central control unit and only one power supply, they are easy to install and economical to expand.

Telephone **features** for your growing business

Caller ID:

Know who's calling before answering.
Supports all caller ID formats.

Directory:

Stores and searches 64 contacts. Quick save from the incoming caller ID.

Speakerphone:

Perfect for hands-free and conference calls. Mute control ensures confidential conversations and office noises don't reach callers.

Call Timer:

Monitor how long that conversation with Tokyo is taking.

Speed Dial:

One touch dialing of frequently called numbers.

Callers List:

Saves the Caller ID name & number, plus the time date and duration of the last 100 calls.

Dialed Number List:

Review, edit and redial any of the last 20 numbers you called.

Message Waiting:

A flashing light and beep indicates a new message waiting.

Power Smart Operation:

Central power supply and rechargeable batteries help reduce cord clutter and ensures continued operation, even during power failures.

Computer Telephony Integration (CTI)

SmarTalk phones can be linked directly to personal computers and contact management programs that are TAPI compatible.

SmartSync

Our installation kits enable programming from one SmarTalk to be uploaded to a PC and then downloaded to other SmarTalks. This time saving tool allows fast and easy customization and replacement of a single phone or an entire office.

Intercom/Page:

Call any station or make paging announcements to all stations without engaging phone lines.

Line/Station Status Indicator:

Monitor the station status of co-workers and executives. Makes transferring calls easy.

Off-Hook Voice Announce with Answer Back:

Make a hands-free announcement of a call being transferred without interrupting the call in progress. Effectively, two calls can take place simultaneously.

Do Not Disturb:

Concentrate on finishing that big project without being disturbed.

Large easy-to-read display:

See who's calling from across your office. Shows you when lines are in use or on hold, and which stations are busy or do not want to be disturbed.

SpeedialPLUS:

Say good-bye to navigating the endless maze and loops of automated systems. One-touch access to voice mail, pass codes and messages.

Toll Restriction:

Block unauthorized call placement and add security to high traffic locations.
